

▶ Stakeholders' roles in VET in times of digitalisation – a German-Swiss comparison

Ute Hippach-Schneider

Federal Institute for Vocational Education and Training

Zollikofen, 04.03.2019

Research interest

Understanding the degree of dynamics and flexibility in VET systems in times of digitalisation by

- Focussing on actors
- Using a comparative approach Germany - Switzerland
- Project start: 01/2019; end 12/2019

Background

Cluster 1

Consequences for the structures of the **labour market** and for **work processes** and tasks at companies and firms, differentiated in a sector-specific way

Cluster 2

Consequences for employees' **competence** requirements

Cluster 3

Consequences for the **VET systems**, e.g. change/acceleration of processes, strengthening of specific parts of the the VET sector, etc.

Focus of the project

Possible impacts on stakeholder constellation and on the role of stakeholders in VET; development of new actors

Theoretical Background

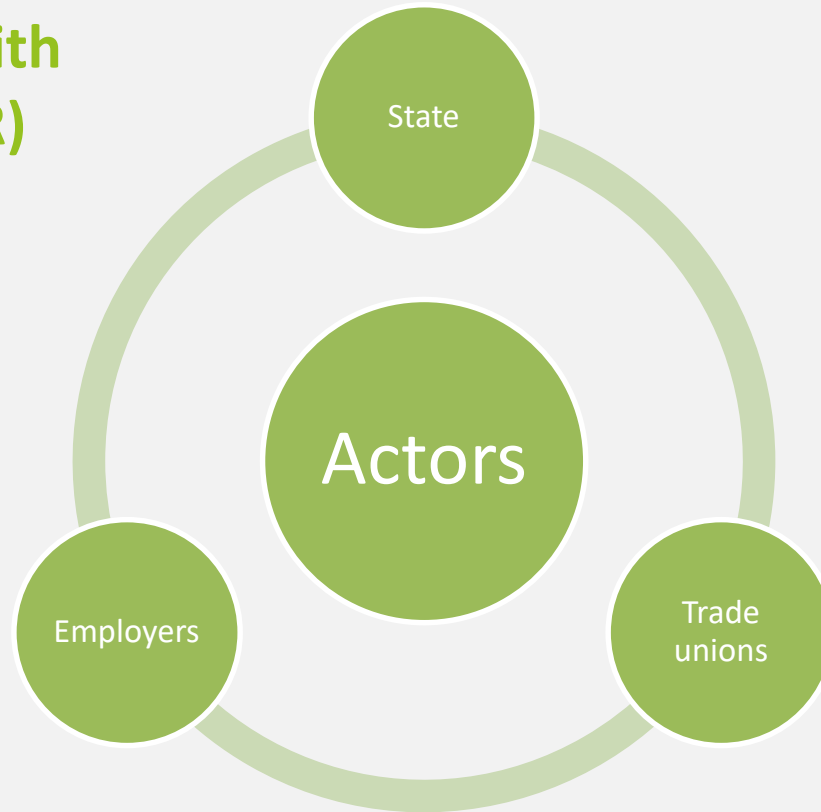

- Theory of patterns of change: Self-preserving versus transformative (e.g. Heidenheimer et al. 1990, Culpepper 2007, Thelen 2007, Thelen and Busemeyer 2008, Ebner and Nikolai 2010, Trampusch 2010)
- Role of actors: with reference to the approach of actor-centred institutionalism (Scharpf 2000)

Methodological approach

Phase 1: Literature analysis

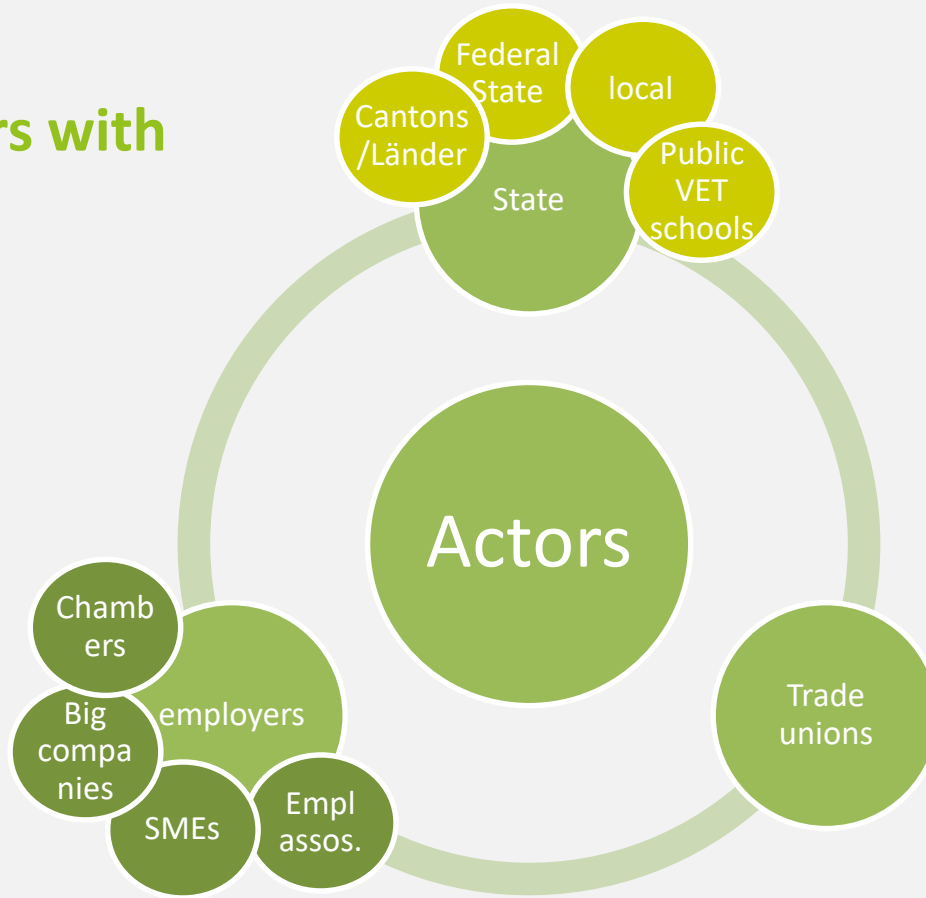

Phase 2: Semi-standardized interviews in D and CH and ongoing literature monitoring

Direct actors with legal basis (GER)

For Switzerland:
Organisations of the world of
work (OoA)

Direct actors with legal basis

Direct and indirect actors

Criteria for selection of examples

- Proposals come from a direct actor + national research institutions
- Implementation have or might have an impact on role of actor/actor's group

Examples from Germany

- Federal Government/Länder governments
 - Digitalisation pact „Schule“ – impact on relation between federal government and *Länder*; initiative to strengthen digitalisation (also of VET schools)
- All direct actors
 - Strengthening CE – impact on role on education providers/education market and the individual learner/increasing relevance of guidance

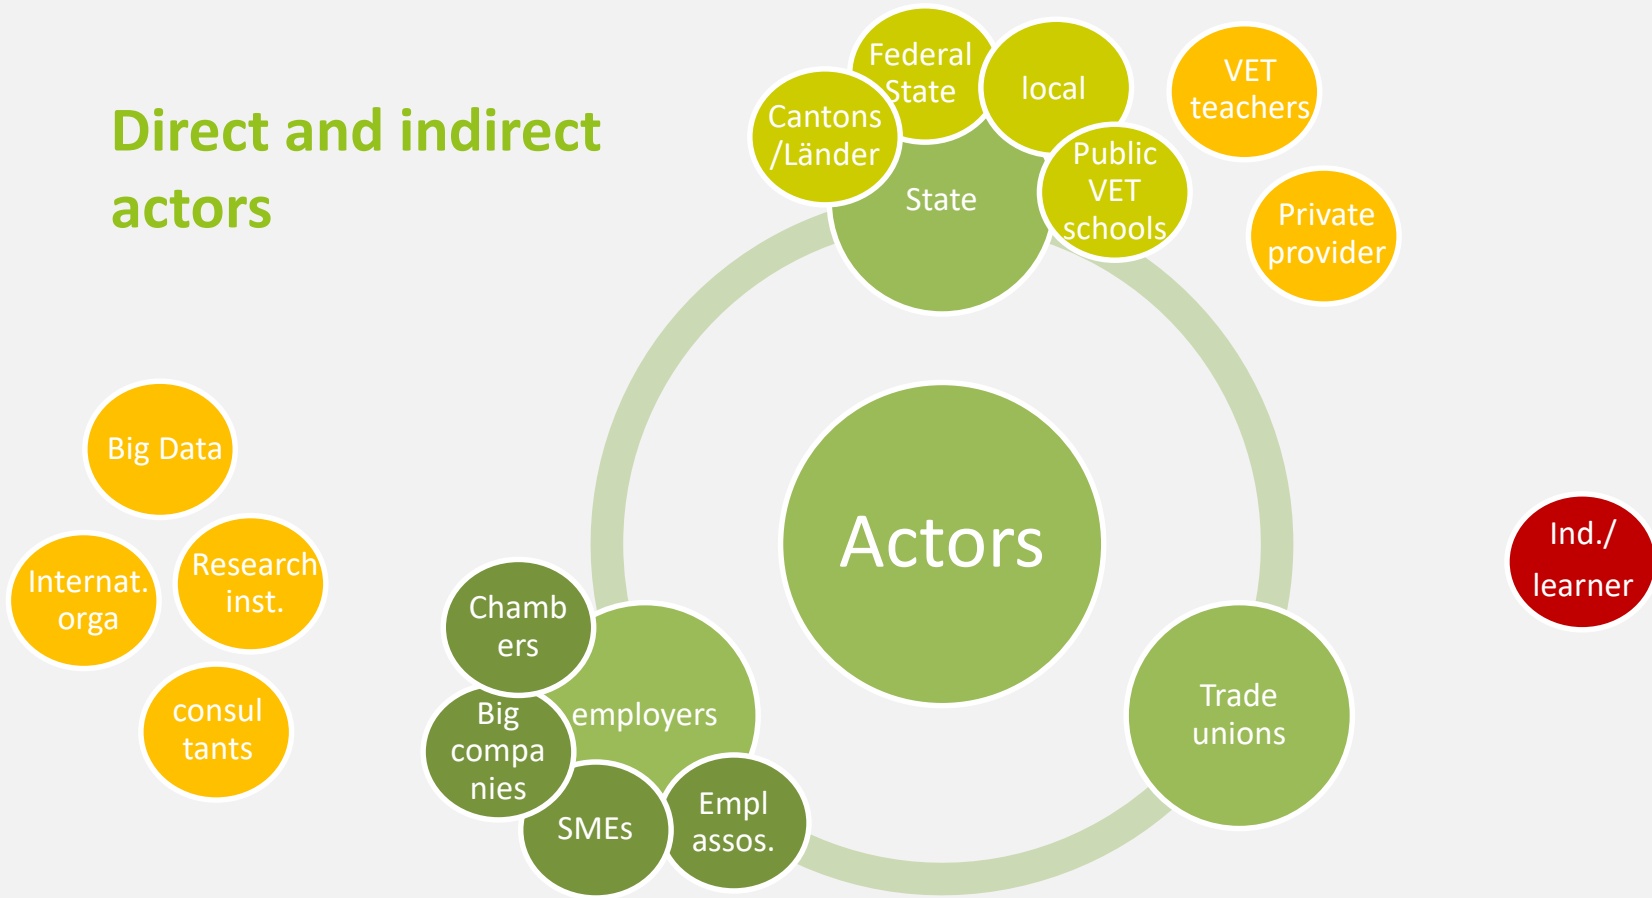

Examples from Germany (cont.)

- Social partners and research institutions
 - Additional qualifications – impact on actor companies: big vs. small
 - Additional qualifications - so far no formal stipulation in respect of the procedure and the drawing up of these qualifications exist – role of traditional actors unclear
 - Training regulations: accelerating the development/updating process – impact on current procedure and potential change of established roles
 - Training regulation: avoiding to overstrain small companies – impact on ability of small companies to offer training
- Trade unions
 - Sponsorship of private tech companies – impact on public responsibility for education

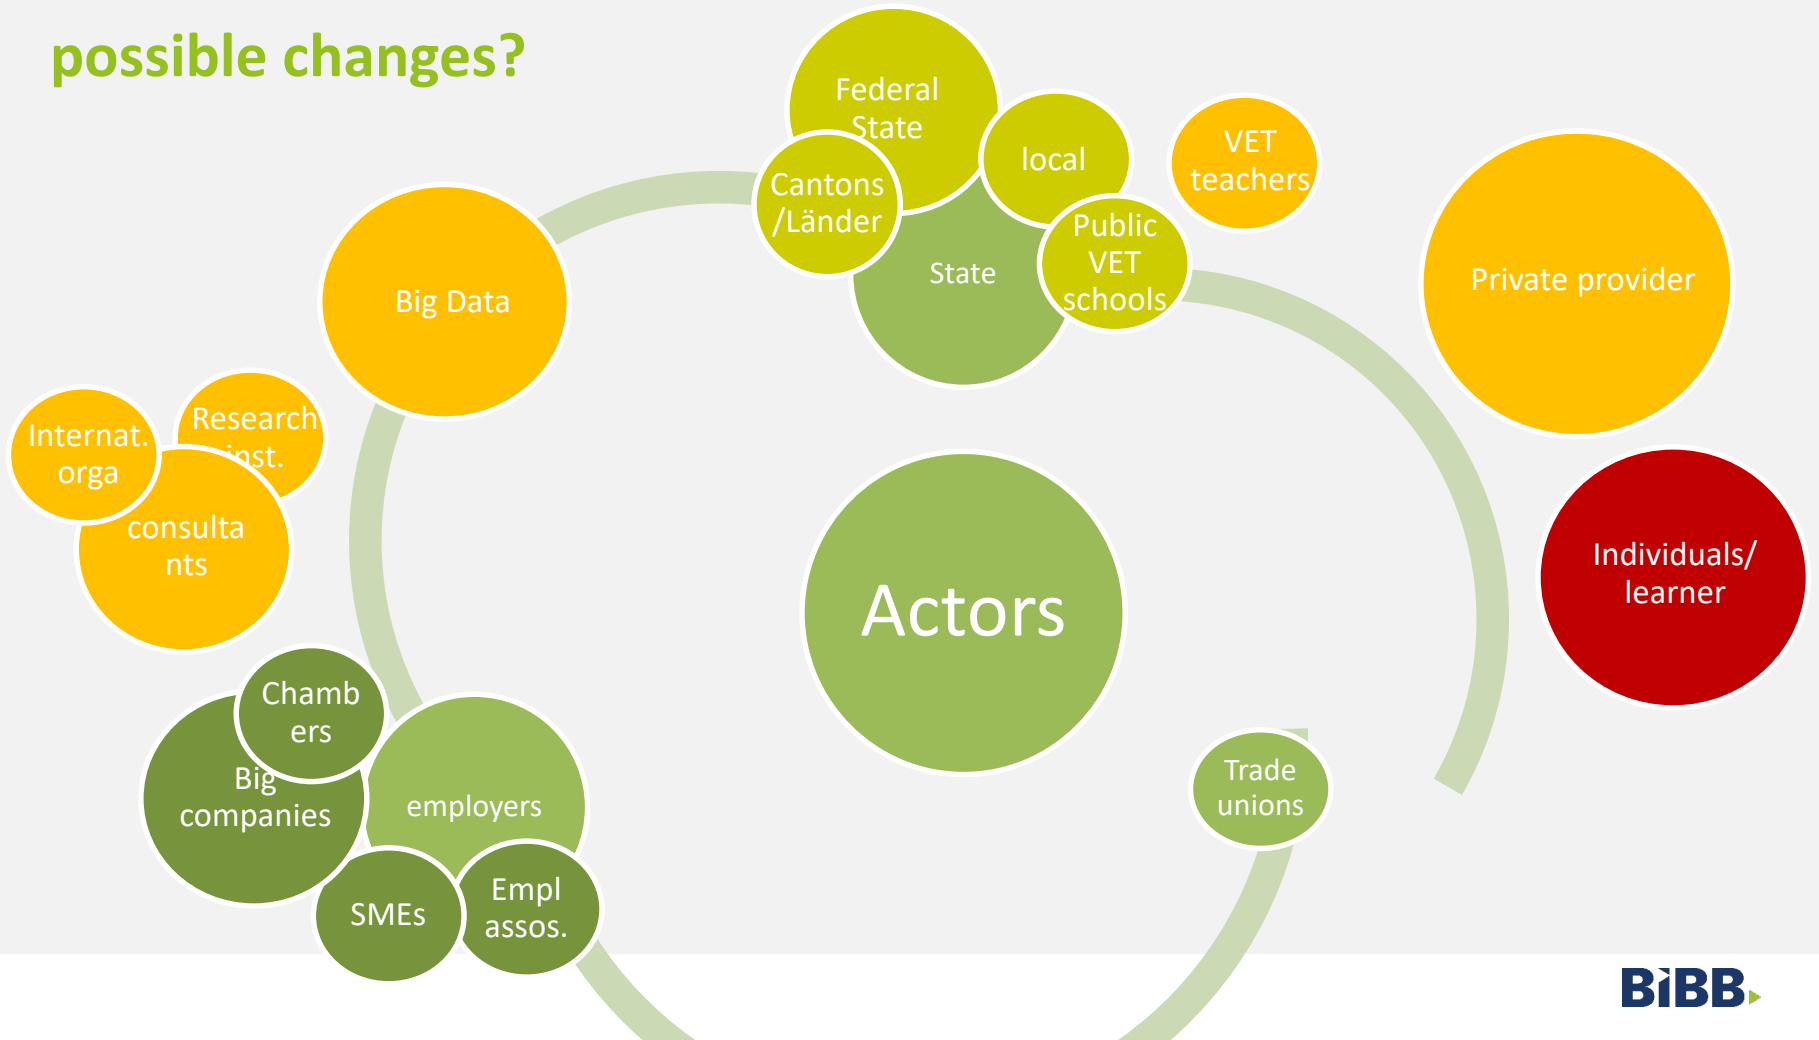

Examples from Switzerland

- Federal State
 - Fostering STEM in education
 - Cooperation between state and cantons on all levels of education
 - Crucial role of tertiary VET; challenge: occupational profiles vs. competences
 - Modularisation/Modulsharing of IVET and CVET
- All actors
 - Strengthening CE and „second chance“ training: focussing on low qualified and older employees
- Research report (Seufert 2018)
 - Enhancing flexibility in VET; by a „change of paradigm“ for VET organisation
 - Hybridqualifications
 - Examinations: involvement of external partners

Direct and indirect actors

possible changes?

Summary

- So far: high flexibility within both systems
- Decision that has direct impact on governance, D: digital pact for schools
- Number of proposals/approaches with impact on actors' roles and constellation, CH/D: hybrid qualifications, CH: modularisation, D: sponsorship, D/CH upspeeding the development of training regulations
- Possible shift within an actor's group, D: Additional qualifications: big vs. small companies
- Role of new/growing direct or indirect actors: big data, consultants, private providers

Thank you very much for your
attention!
